Our Mission - to make a safer, more efficient and cost effective operating environment by supplying advanced, reliable and innovative orientation and monitoring solutions.

Our products have been tried and tested by marine pilots and mooring masters around the world for over a decade, and are currently used in over twenty countries.

Technically advanced, independent portable pilot units

HarbourPilot - exceptional accuracy and fully independent of ships systems. Supports all piloting operations – anywhere.

ChannelPilot – small, lightweight and cost effective. Ideal for navigating narrow channels and some restricted manoeuvres.

GyroPilot – adds smoothed heading and ROT to pilot plug data with GPS fall-back.

Fully customised berthing aid solutions for the offshore industry

ShuttlePilot – customised berthing aid systems for relative positioning in tandem mooring, side-by-side mooring or ship to buoy mooring with emergency shutdown features.

Bespoke precision GNSS positioning systems for various markets

Navicom Dynamics team of dedicated experts is able to provide solutions for bespoke precision GNSS positioning projects - both at sea and on land. Our experts have excellent knowledge in navigation, electronics and avionics engineering, customised ENC development, and have provided technological solutions to leading businesses throughout the world.
